Aviation meteorology is one of the most challenging operational careers in meteorology. This presentation will give an in-depth look into the FedEx Meteorology Department, which is the second largest private airline meteorology group in the world. FedEx operates into 375 airports and 220 countries worldwide, and produces over 3,000 domestic and international aviation forecasts a month. I'll give an overview of the general needs of the airline and how we meet those needs in an operational setting. Additionally, we'll discuss particularly challenging meteorological situations faced by the airlines and the aviation meteorology community in general and look at the forecast products and tools used on the floor of the Global Operations Control Center of a major airline meteorology group.

Warren Weston
Senior Meteorologist
FedEx Meteorology
